AclListRights

This function returns a table of all the rights that a given ACL has.

Syntax

```
table aclListRights ( acl theACL, string allowedType )
```

OOP Syntax Help! I don't understand this!

> **Method**: *acl:listRights(...)*

Required Arguments

- **theACL:** The ACL to get the rights from
- **allowedType:** The allowed right type. Possible values are *general*, *function*, *resource* and *command*

Returns

Returns a table over the rights as strings in the given ACL. This table might be empty. Returns *false* or *nil* if theACL is invalid or it fails for some other reason.
