GetRadarAreaColor

This function can be used to retrieve the current color of a radar area.

Syntax

```
int, int, int, int getRadarAreaColor ( radararea theRadararea )
```

OOP Syntax Help! I don't understand this!

Method: *radararea:getColor(...)*

Required Arguments

- **theRadararea:** The radar area you wish to retrieve the colour of.

Returns

Returns four integers in RGBA format (*red*, *green*, *blue*, *alpha*), with a maximum value of 255 for each. Alpha decides transparency where 255 is opaque and 0 is transparent. Returns *false* if the radararea is invalid.
