GuiComboBoxSetSelected

This function sets the selected item from a combobox.

Syntax

```
bool guiComboBoxSetSelected ( element comboBox, int itemIndex )
```

OOP Syntax Help! I don't understand this!

      Method: *GuiComboBox:setSelected(...)*
      Variable: *.selected*
      Counterpart: *guiComboBoxGetSelected*

Required Arguments

- **comboBox:** the combobox you want to select an item from
- **itemIndex:** the item you want to select (item 0 is the first item). If -1 is specified, then the combo box text is set to it's *caption*.

Returns

Returns *true* if the selected item has been changed successfully, *false* otherwise.
