UpdateResourceACLRequest

This function changes the access for one ACL request of the given resource.

> **Note:** This function is protected by default and must be explicitly allowed in the server ACL.

Syntax

```
bool updateResourceACLRequest ( resource theResource, string rightName, bool access [, string byWho = "" ] )
```

Required Arguments

- **theResource:** the resource to set the ACL request for.
- **rightName:** a string with the name of the right to set the access for. This has to match an existing ACL request.
- **access:** a boolean value setting the access. True is for allow, and false for deny.

Optional Arguments

- **byWho:** a string value to identity who is changing the setting.

Returns

Returns true if the setting was changed, or *false* if no change was required or there was a problem with the arguments.
