AclGroupGetName

This function is used to get the name of the given ACL group.

Syntax

```
string aclGroupGetName ( aclgroup aclGroup )
```

OOP Syntax Help! I don't understand this!

>   **Method**: *aclgroup:getName(...)*
>   **Variable**: *.name*

Required Arguments

- **aclGroup:** The ACL group to get the name of

Returns

Returns the name of the given ACL group as a string if successful, otherwise *false* or *nil* if the aclGroup is invalid or it fails for some other reason.
