GuiGridListAutoSizeColumn

This allows you to automatically size a column to display everything in it correctly, with the most minimal width.

Syntax

```
bool guiGridListAutoSizeColumn ( element gridList, int columnIndex )
```

OOP Syntax Help! I don't understand this!

> **Method**: *GuiGridList:autoSizeColumn(...)*

Required Arguments

- **gridList:** The grid list element where the column is located.
- **columnIndex:** The ID of the column you want to be auto-sized.

Returns

Returns *true* if the column was auto-sized, *false* otherwise.
