XmlNodeGetName

Gets the tag name of the specified XML node.

Syntax

```
string xmlNodeGetName ( xmlnode node )
```

OOP Syntax Help! I don't understand this!

> **Method**: *xmlnode:getName(...)*
> **Variable**: *.name*
> **Counterpart**: *xmlNodeSetName*

Required Arguments

- **node:** the node to get the tag name of.

Returns

Returns the tag name of the node if successful, *false* otherwise.
