GetVehiclesOfType

This function scans through all the current vehicles and returns the ones matching the given model.

Syntax

```
table getVehiclesOfType ( int model )
```

OOP Syntax Help! I don't understand this!

> **Note**: *This function is a static function underneath the Vehicle class.*
> **Method**: *Vehicle.getAllOfType(...)*

Required Arguments

- **model**: The model of vehicles you want.

Returns

Returns a table of existing vehicles matching the specified model.
