FocusBrowser

This function will attempt to focus the browser or unfocus all browsers. The browser that is focused will retrieve keyboard input.

Syntax

```
bool focusBrowser ( browser webBrowser )
```

OOP Syntax Help! I don't understand this!

> **Method**: *browser:focus(...)*

Required Arguments

- **webBrowser:** The web browser to be focused - if this is **nil**, it will unfocus all browsers.

Returns

Returns *true* if the browser was focused or if nil was passed, *false* if it failed to focus or the browser does not exist.
