SetColShapeRadius

This function is used to set the radius of a colshape. Valid types are circle, sphere and tube.

Syntax

```
bool setColShapeRadius ( colshape shape, float radius )
```

OOP Syntax Help! I don't understand this!

>   **Method**: *colshape:setRadius(...)*
>   **Counterpart**: *getColShapeRadius*

Required Arguments

- **shape:** The colshape you wish to change the radius of.
- **radius:** The radius you want to set.

Returns

Returns *true* if the radius was changed, or *false* if invalid arguments were passed.
