GetAccountsByIP

This function returns a table containing all accounts that were logged onto from specified IP-address.

Syntax

```
table getAccountsByIP ( string ip )
```

OOP Syntax Help! I don't understand this!

>   **Note**: *This function is a static function underneath the Account class.*
>   **Method**: *Account.getAllByIP(...)*

Required Arguments

*   **ip:** The IP to get accounts from.

Returns

Returns *table* containing the accounts associated with specified IP-address. Returns *false* if invalid arguments were specified.
