GuiGetBrowser

This function gets the browser element behind a gui-browser (a browser that has been created via guiCreateBrowser).

Syntax

```
browser guiGetBrowser ( gui-browser theBrowser )
```

OOP Syntax Help! I don't understand this!

> **Method**: *guiBrowser:getBrowser(...)*
> **Variable**: *.browser*

Required Arguments

- **theBrowser:** The gui-browser

Returns

Returns the Browser element if a correct gui-browser has been passed, *false* otherwise.
