GetVehiclePlateText

This function is used to retrieve the text on the number plate of a specified vehicle.

Syntax

```
string getVehiclePlateText ( vehicle theVehicle )
```

OOP Syntax Help! I don't understand this!

> **Method**: *vehicle:getPlateText(...)*
> **Variable**: *.plateText*
> **Counterpart**: *setVehiclePlateText*

Required Arguments

- **theVehicle:** the vehicle that you wish to retrieve the plate text from.

Returns

Returns a *string* that corresponds to the plate on the text, *false* if a bad argument was passed or if it is not a vehicle. Every vehicle (including planes, boats, etc.) has a numberplate, even if it's not visible.
