SetVehicleModelExhaustFumesPosition

This function sets the position of the exhaust fumes the vehicle model emits. Use setVehicleComponentPosition to adjust the exhaust position.

Syntax

```
bool setVehicleModelExhaustFumesPosition ( int modelID, float posX, float posY, float posZ )
```

OOP Syntax Help! I don't understand this!

> **Method**: *Vehicle.setModelExhaustFumesPosition(...)*
> **Counterpart**: *getVehicleModelExhaustFumesPosition*

Required Arguments

- **modelID**: The model ID which you want to apply the change to
- **posX**, **posY**, **posZ**: The desired position

Returns

Returns *true* if everything went fine, *false* otherwise.
