FileIsEOF

Checks if the file position is at the end of the file.

> **Note:** Due to underlying C API restrictions this function may return false until an attempt to read further than the end of the file is made.

Syntax

```
bool fileIsEOF ( file theFile )
```

OOP Syntax Help! I don't understand this!

Method: *file:isEOF(...)*
Variable: *.eof*

Required Arguments

- **theFile:** A handle to the file you wish to check.

Returns

Returns *true* if the file position of the specified file is at the end of the file, *false* otherwise.
