# GetAircraftMaxVelocity

This function returns the maximum velocity at which aircrafts could fly. Using this function server-side will return the server-side value, not necessarily the same that is set client-side.

## Syntax

```
float getAircraftMaxVelocity ()
```

### Returns

Returns a float being the max velocity that is currently set, depending on which side it is used.

# GetAircraftMaxVelocity

This function returns the maximum velocity at which aircrafts could fly. Using this function server-side will return the server-side value, not necessarily the same that is set client-side.

## Syntax

```
float getAircraftMaxVelocity ()
```
