IsBrowserLoading

This function checks if a browser is currently loading a website.

Syntax

```
bool isBrowserLoading ( browser webBrowser )
```

OOP Syntax Help! I don't understand this!

>**Method**: *browser:isLoading(...)*
>**Variable**: *.loading*

Required arguments

- **webBrowser:** The browser

Returns

Returns *true* if the browser is loading a website, *false* otherwise and *nil* if invalid arguments were passed.
