AclDestroy

This function destroys the ACL passed. The destroyed ACL will no longer be valid.

Syntax

```
bool aclDestroy ( acl theACL )
```

OOP Syntax Help! I don't understand this!

> **Method**: *acl:destroy(...)*

Required Arguments

- **theACL:** The ACL to destroy

Returns

Returns *true* if successfully destroyed and *false* if it could not be deleted (ie. it's not valid).
