Utf8.remove

This function removes a substring in a UTF-8 string by using a position range.

Syntax

```
string utf8.remove ( string input, int start = 1 [, int stop = -1 ] )
```

Required Arguments

- **input:** A string character sequence
- **start:** An integer representing the beginning position.

Optional Arguments

NOTE: When using optional arguments, you might need to supply all arguments before the one you wish to use. For more information on optional arguments, see optional arguments.

- **stop:** An integer representing the ending position.

Returns

Returns the *string* with the removed substring from the range.
