SetLowLODElement

This function assigns a low LOD element to an element. The low LOD element is displayed when its associated element is not fully visible. If a low LOD element is assigned to several elements, it will be displayed when any of these elements are not fully visible.

Syntax

```
bool setLowLODElement ( element theElement, element lowLODElement )
```

OOP Syntax Help! I don't understand this!

>**Method**: *element:setLowLOD(...)*
>**Variable**: *.lowLOD*
>**Counterpart**: *getLowLODElement*

Required Arguments

- **theElement:** The element whose low LOD version we want to change.
- **lowLODElement :** A low LOD element to display when the first element is not fully visible.

Returns

Returns *true* if the assignment was successful, *false* otherwise.
