AclGetName

Get the name of given ACL.

Syntax

```
string aclGetName ( acl theAcl )
```

OOP Syntax Help! I don't understand this!

> **Method**: *acl:getName(...)*
> **Variable**: *.name*

Required Arguments

- **theACL:** The ACL to get the name of

Returns

Returns the name of the given ACL as a string if successful. Returns *false*/*nil* if unsuccessful, ie the ACL is invalid.
