SetBrowserVolume

This function sets either a specific browser's volume, or the overall volume for browsers.

Syntax

```
bool setBrowserVolume ( [browser webBrowser], float volume )
```

OOP Syntax Help! I don't understand this!

> **Method**: *browser:setVolume(...)*
> **Variable**: *.volume*
> **Counterpart**: *getBrowserVolume*

Required Arguments

- **volume:** A floating point number representing the desired volume level. Range is from **0.0** to **1.0**

Optional Arguments

- **webBrowser:** A browser element
