GetAllElementData

> **ADDED/UPDATED IN VERSION 1.6.0 r21695:**
> Added also as a client-side function. Previously only available as a server-side function.

Returns a table of all element data of an element.

Syntax

```
table getAllElementData ( element theElement )
```

OOP Syntax Help! I don't understand this!

    Method: *element:getAllData(...)*

Required Arguments

- **theElement:** the element you want to get the element data of.

Returns

If successful, returns a table with as keys the names of the element data and as values the corresponding element data values. Returns *false* in case of failure.
