GetThisResource

This function retrieves the resource from which the function call was made.

> **Note:** Every resource has a predefined global variable called *resource* that contains the resource pointer for that resource, in other words, the value that this function returns.

Syntax

```
resource getThisResource ( )
```

OOP Syntax Help! I don't understand this!

> **Note**: *This function is a static function underneath the Resource class.*
> **Method**: *Resource.getThis(...)*

Returns

Returns the resource in which the current script is.
