AclSave

The ACL XML file is automatically saved whenever the ACL is modified, but the automatic save can be delayed by up to 10 seconds for performance reasons. Calling this function will force an immediate save.

Syntax

```
bool aclSave ()
```

OOP Syntax Help! I don't understand this!

> **Note**: *This function is a static function underneath the ACL class.*
> **Method**: *ACL.save(...)*

Returns

Returns *true* if the ACL was successfully changed, *false* or *nil* if it could not be saved for some reason, ie. file in use.
