GetTypeIndexFromClothes

This function is used to get the clothes type and index from the texture and model. (Scans through the list of clothes for the specific type).

Syntax

```
int int getTypeIndexFromClothes ( string clothesTexture, string clothesModel )
```

Required Arguments

- **clothesTexture**: A string determining the clothes texture that you wish to retrieve the type and index from. See the clothes catalog.
- **clothesModel**: A string determining the corresponding clothes model that you wish to retrieve the type and index from. See the clothes catalog.

Returns

This function returns two integers, type and index respectively, *false* if invalid arguments were passed to the function.
